

Conflation protocol

reference layer:                   vyber\_obce  
subject layer:                   vyber\_CR  
new layer:                        vyber\_CR(4)  
distance tolerance:               500  
conflation method:               Snap Vertices

number of processed features:       94  
number of invalid features:       11

ids of invalid features (needs to be repaired manually):  
6  
18  
22  
45  
66  
68  
69  
73  
75  
76  
89

NOTE: The high number of invalid features can be caused by too large tolerance distance or by combining two layers with very different precision. Please try conflation again with different settings or check if data are topologically correct.
